What is Digital Transformation?

“The use of new, fast and frequently changing digital technology to solve problems often utilising cloud computing, reducing reliance on user owned hardware but increasing reliance on subscription based cloud services.

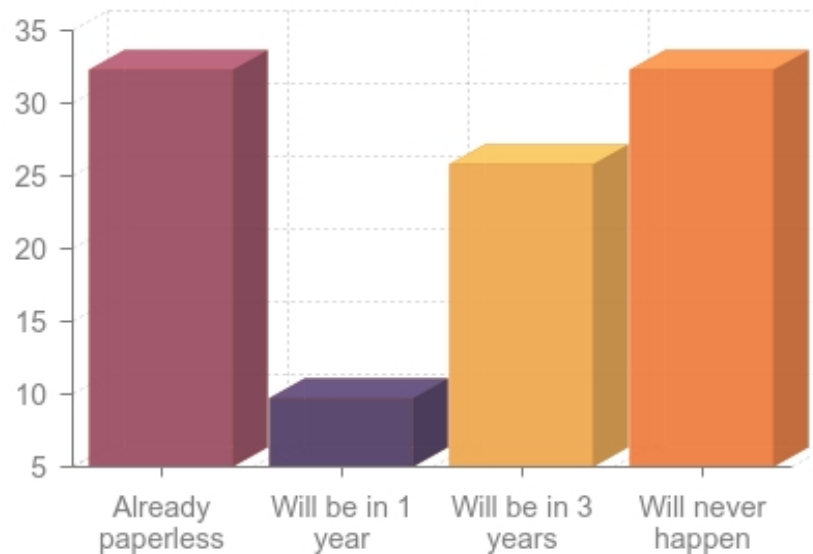

Some of these digital solutions enable - in addition to efficiency via automation - new types of innovation and creativity, rather than simply enhance and support traditional methods

One aspect of digital transformation is the concept of 'going paperless' or reaching a 'digital business maturity' affecting both individual businesses and whole segments of society, such as government, mass communications, art, medicine, and science” ^{*1}
